THEMATIC PLAN
OF PRACTICAL LESSONS AT DOCTORS PRACTICE
IN THERAPEUTIC STOMATOLOGY
for the students of 3-rd course for 6 term
on 2023-2024 academic years

Serial №	Topic of practical lesson	Q-ty of study hours
Module 2. Doctors practice in therapeutic dentistry		
1.	Principles of the organization of the work of the dental clinic therapeutic profile. Safety precautions in the dental office. Medical documentation of therapeutic reception. Prevention of emergency conditions in the clinic of therapeutic dentistry (dizziness, loss of consciousness, hypertensive crisis, urticaria, anaphylactic shock). Identify leading symptoms and emergency care. Assessment of the patient's condition.	2
2.	Determining the state of oral hygiene. Microbial biofilm: composition, properties, methods of its determination. Definition and evaluation of the results of hygienic indices of Green-Vermilion, Fedorov-Volodkina. Conducting professional oral hygiene in various ways: manual, hardware (sound, ultrasound, air-abrasive), chemical and combined. Monitoring the results of oral hygiene (index of oral hygiene efficiency by Podshadley, Haley).	2
3.	Reception of patients with caries. Diagnosis and differential diagnosis of various forms of caries on the basis of basic and additional research methods. Filling of dental patient medical card. Establishing the diagnosis and determining the tactics of caries treatment taking into account the clinical course of the pathology (acute, chronic, multiple, recurrent, secondary). Conducting staged treatment of acute, chronic caries. Features of diagnosis and treatment of multiple caries. Participation in the dispensary observation of patients.	2

4.	Reception of patients with reversible forms of pulpitis. Diagnosis and differential diagnosis of various forms of pulpitis on the basis of basic and additional research methods. Establishing the diagnosis and determining the method of treatment of pulpitis, taking into account the clinical course of pathology. Filling of dental patient medical card. The staged treatment of pulpitis biological method, the method of vital amputation and extirpation. The choice of method of anesthesia and anesthetic. First aid for acute purulent pulpitis and for exacerbation of chronic pulpitis.	2
5.	Reception of patients with irreversible forms of pulpitis. Diagnosis and differential diagnosis of various forms of pulpitis on the basis of basic and additional research methods. Establishing the diagnosis and determining the method of treatment of pulpitis, taking into account the clinical course of pathology. Filling of dental patient medical card. Conducting staged treatment of pulpitis by the method of devital amputation and extirpation, using the combined method.	2
6.	Reception of patients with periodontitis. Diagnostics and differential diagnostics of various forms of periodontitis on the basis of the main and additional research methods (thermiodiagnostics, electrical donor diagnostics, X-ray diagnostics), evaluation of the results of their conduct. Interpretation of radiographs. Establishing a diagnosis and determining a treatment plan for periodontitis, taking into account the clinical course of the pathology. Filling of dental patient medical card. Stages of treatment of acute, chronic periodontitis and its exacerbations. First aid for acute purulent periodontitis and for exacerbation of chronic periodontitis. Treatment of chronic forms of apical periodontitis in a short time.	2
7.	Reception of patients with non-carious teeth lesions. Diagnosis and differential diagnosis of various forms of non-carious lesions that occur before and after teething. the basis of the main and additional research methods. Establishing the diagnosis and determination of treatment methods for non-carious lesions, taking into account the type and clinical course of the pathology. Filling of dental patient medical card. Conducting staged treatment of non-carious lesions of the teeth. The choice of method of anesthesia and anesthetic. Participation in the dispensary observation of patients.	2
8.	Control of practical skills. Final module control 2.	1
